Short Assignment 2.1

Access of Alcohol

With 43% of students at Granger high school reporting that they could get their hands on alcohol if they wanted, this shows that alcohol is easily accessible to almost 1 in 2 students. When Eden Asher was interviewed about their knowledge on the school's Student Assisted Professional, a student at Granger High School had this to say "I do not know who she is". If students are not able to identify their school drug and alcohol resource counselor, they would not be able to seek the help if they needed. If 43% of students at Granger High School can easily get their hands on alcohol, that tells community members there is not enough security and monitoring of alcohol. 43% of students can access alcohol and are not aware of their drug and resource counselor, there needs to be measurements in place to help prevent the access of alcohol and spread the awareness of the drug and resource counselor to students. Nellie Padilla is Granger High School's Student Assisted Professional who is designed to assist students with preventing substance abuse and helping students quit. When asked about the ease of access to alcohol, Nellie Padilla states "students typically access alcohol through older friends or stores that do not check ID". There is a responsibility on parents/guardians to keep alcohol out of the reach of their children and check up on them. Alcohol, One word that describes the self destruction of people in every community in the country.
